## S-1 Proof that likelihood is non-decreasing after truncation to zero

We first simplify the term  $f_\epsilon(\mathbf{W}, \tilde{\mathbf{H}}^{(l)}) - u_2(\tilde{\mathbf{H}}^{(l+1)}, \tilde{\mathbf{H}}^{(l)} | \mathbf{W})$  by writing out these terms as follows. Firstly, for  $f_\epsilon(\mathbf{W}, \tilde{\mathbf{H}}^{(l)})$ , we have

$$\begin{aligned}
 f_\epsilon(\mathbf{W}, \tilde{\mathbf{H}}^{(l)}) &= \sum_{m=1}^M \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ -\log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}) + \log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}) \right] \\
 &= \sum_m \sum_{\substack{(i',j'):\\ i',j' \neq i}} b_{i'j'}^{(m)} \left[ -\log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi'}) + \log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi'} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj'}) \right] \quad (\text{S-1}) \\
 &\quad + \sum_m \sum_{j \neq i: (i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ -\log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}) \right] \\
 &\quad + \sum_m \sum_{j \neq i: (i,j) \in \mathcal{P}_m} (b_{ij}^{(m)} + b_{ji}^{(m)}) \left[ \log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}) \right]
 \end{aligned}$$

Next for  $u_2(\tilde{\mathbf{H}}^{(l+1)}, \tilde{\mathbf{H}}^{(l)} | \mathbf{W})$ , we have

$$\begin{aligned}
 u_2(\tilde{\mathbf{H}}^{(l+1)}, \tilde{\mathbf{H}}^{(l)} | \mathbf{W}) &= \sum_{m=1}^M \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ -\sum_k \frac{w_{mk}(\tilde{h}_{ki}^{(l)} + \epsilon)}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}} \log \left( \frac{\tilde{h}_{ki}^{(l+1)} + \epsilon}{\tilde{h}_{ki}^{(l)} + \epsilon} [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} \right) \right. \\
 &\quad \left. + \log \left( [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj} \right) + \frac{\sum_k w_{mk}(\tilde{h}_{ki}^{(l+1)} + \tilde{h}_{kj}^{(l+1)} + 2\epsilon)}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}} - 1 \right] \\
 &= \sum_{m=1}^M \sum_{\substack{(i',j'):\\ i',j' \neq i}} b_{i'j'}^{(m)} \left[ -\sum_k \frac{w_{mk}(\tilde{h}_{ki'}^{(l)} + \epsilon)}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi'}} \log \left( \frac{\tilde{h}_{ki'}^{(l)} + \epsilon}{\tilde{h}_{ki'}^{(l)} + \epsilon} [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi'} \right) \right. \\
 &\quad \left. + \log \left( [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi'} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj'} \right) + \frac{\sum_k w_{mk}(\tilde{h}_{ki'}^{(l)} + \tilde{h}_{kj'}^{(l)} + 2\epsilon)}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi'} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj'}} - 1 \right] \\
 &\quad + \sum_{m=1}^M \sum_{j \neq i: (i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ -\sum_k \frac{w_{mk}(\tilde{h}_{ki}^{(l)} + \epsilon)}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}} \log \left( \frac{\tilde{h}_{ki}^{(l+1)} + \epsilon}{\tilde{h}_{ki}^{(l)} + \epsilon} [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} \right) \right] \\
 &\quad + \sum_{m=1}^M \sum_{j \neq i: (i,j) \in \mathcal{P}_m} (b_{ij}^{(m)} + b_{ji}^{(m)}) \left[ \log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}) + \frac{\sum_k w_{mk}(\tilde{h}_{ki}^{(l+1)} + \tilde{h}_{kj}^{(l+1)} + 2\epsilon)}{\sum_k w_{mk}(\tilde{h}_{ki}^{(l)} + \tilde{h}_{kj}^{(l)} + 2\epsilon)} - 1 \right]
 \end{aligned}$$

$$\begin{aligned}
&= \sum_{m=1}^M \sum_{\substack{(i',j'):\\ i',j' \neq i}} b_{i'j'}^{(m)} \left[ -\log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi'}) + \log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi'} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj'}) \right] \\
&+ \sum_{m=1}^M \sum_{\substack{j \neq i:\\ (i,j) \in \mathcal{P}_m}} b_{ij}^{(m)} \left[ -\sum_{k' \neq k} \frac{w_{mk'}(\tilde{h}_{k'i}^{(l)} + \epsilon)}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}} \log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}) \right. \\
&\quad \left. - \frac{w_{mk}(\tilde{h}_{ki}^{(l)} + \epsilon)}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}} \log\left(\frac{\epsilon}{\tilde{h}_{ki}^{(l)} + \epsilon} [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}\right) \right] \\
&+ \sum_{m=1}^M \sum_{\substack{j \neq i:\\ (i,j) \in \mathcal{P}_m}} (b_{ij}^{(m)} + b_{ji}^{(m)}) \log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}) \\
&+ \sum_{m=1}^M \sum_{\substack{j \neq i:\\ (i,j) \in \mathcal{P}_m}} (b_{ij}^{(m)} + b_{ji}^{(m)}) \left[ \frac{\sum_{k' \neq k} w_{mk'}(\tilde{h}_{ki}^{(l)} + \epsilon) + w_{mk}(\epsilon) + \sum_k w_{mk}(\tilde{h}_{kj}^{(l)} + \epsilon)}{\sum_k w_{mk}(\tilde{h}_{ki}^{(l)} + \tilde{h}_{kj}^{(l)} + 2\epsilon)} - 1 \right]
\end{aligned} \tag{S-2}$$

When we calculate  $f_\epsilon(\mathbf{W}, \tilde{\mathbf{H}}^{(l)}) - u_2(\tilde{\mathbf{H}}^{(l+1)}, \tilde{\mathbf{H}}^{(l)} | \mathbf{W})$ , the expressions in (S-1) and (S-2) cancel and we have:

$$\begin{aligned}
&f_\epsilon(\mathbf{W}, \tilde{\mathbf{H}}^{(l)}) - u_2(\tilde{\mathbf{H}}^{(l+1)}, \tilde{\mathbf{H}}^{(l)} | \mathbf{W}) \\
&= \sum_m \sum_{j \neq i: (i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ -\log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}) \right] \\
&+ \sum_m \sum_{j \neq i: (i,j) \in \mathcal{P}_m} (b_{ij}^{(m)} + b_{ji}^{(m)}) \left[ \log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}) \right] \\
&- \sum_{m=1}^M \sum_{\substack{j \neq i:\\ (i,j) \in \mathcal{P}_m}} b_{ij}^{(m)} \left[ -\sum_{k' \neq k} \frac{w_{mk'}(\tilde{h}_{k'i}^{(l)} + \epsilon)}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}} \log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}) \right. \\
&\quad \left. - \frac{w_{mk}(\tilde{h}_{ki}^{(l)} + \epsilon)}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}} \log\left(\frac{\epsilon}{\tilde{h}_{ki}^{(l)} + \epsilon} [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}\right) \right] \\
&- \sum_{m=1}^M \sum_{\substack{j \neq i:\\ (i,j) \in \mathcal{P}_m}} (b_{ij}^{(m)} + b_{ji}^{(m)}) \log([\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}) \\
&- \sum_{m=1}^M \sum_{\substack{j \neq i:\\ (i,j) \in \mathcal{P}_m}} (b_{ij}^{(m)} + b_{ji}^{(m)}) \left[ \frac{\sum_{k' \neq k} w_{mk'}(\tilde{h}_{ki}^{(l)} + \epsilon) + w_{mk}(\epsilon) + \sum_k w_{mk}(\tilde{h}_{kj}^{(l)} + \epsilon)}{\sum_k w_{mk}(\tilde{h}_{ki}^{(l)} + \tilde{h}_{kj}^{(l)} + 2\epsilon)} - 1 \right] \\
&= \sum_{m=1}^M \sum_{\substack{j \neq i:\\ (i,j) \in \mathcal{P}_m}} b_{ij}^{(m)} \left[ \frac{w_{mk}(\tilde{h}_{ki}^{(l)} + \epsilon)}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}} \log\left(\frac{\epsilon}{\tilde{h}_{ki}^{(l)} + \epsilon}\right) \right] \\
&+ \sum_{m=1}^M \sum_{\substack{j \neq i:\\ (i,j) \in \mathcal{P}_m}} (b_{ij}^{(m)} + b_{ji}^{(m)}) \left[ \frac{w_{mk} \tilde{h}_{ki}^{(l)}}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}} \right]
\end{aligned}$$

Using the inequality when truncation to zero is invoked, i.e.,

$$\frac{\sum_m \sum_{j \neq i} b_{ij}^{(m)} \frac{w_{mk}(\tilde{h}_{ki}^{(l)} + \epsilon)}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}}}{\sum_m \sum_{j \neq i} (b_{ij}^{(m)} + b_{ji}^{(m)}) \frac{w_{mk}}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}}} \leq \epsilon$$

we obtain

$$\begin{aligned}
& f_\epsilon(\mathbf{W}, \tilde{\mathbf{H}}^{(l)}) - u_2(\tilde{\mathbf{H}}^{(l+1)}, \tilde{\mathbf{H}}^{(l)} | \mathbf{W}) \\
&= -\log\left(\frac{\tilde{h}_{ki}^{(l)} + \epsilon}{\epsilon}\right) \left[ \sum_{m=1}^M \sum_{\substack{j \neq i: \\ (i,j) \in \mathcal{P}_m}} b_{ij}^{(m)} \frac{w_{mk}(\tilde{h}_{ki}^{(l)} + \epsilon)}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi}} \right] \\
&\quad + \sum_{m=1}^M \sum_{\substack{j \neq i: \\ (i,j) \in \mathcal{P}_m}} (b_{ij}^{(m)} + b_{ji}^{(m)}) \left[ \frac{w_{mk} \tilde{h}_{ki}^{(l)}}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}} \right] \\
&\geq -\log\left(\frac{\tilde{h}_{ki}^{(l)} + \epsilon}{\epsilon}\right) \cdot \epsilon \cdot \sum_{m=1}^M \sum_{\substack{j \neq i: \\ (i,j) \in \mathcal{P}_m}} (b_{ij}^{(m)} + b_{ji}^{(m)}) \frac{w_{mk}}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}} \\
&\quad + \sum_{m=1}^M \sum_{\substack{j \neq i: \\ (i,j) \in \mathcal{P}_m}} (b_{ij}^{(m)} + b_{ji}^{(m)}) \left[ \frac{w_{mk} \tilde{h}_{ki}^{(l)}}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}} \right] \\
&= \sum_{m=1}^M \sum_{\substack{j \neq i: \\ (i,j) \in \mathcal{P}_m}} (b_{ij}^{(m)} + b_{ji}^{(m)}) \left[ \frac{w_{mk}}{[\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\tilde{\mathbf{H}}^{(l)} + \epsilon \mathbf{1})]_{mj}} \left( -\epsilon \log\left(\frac{\tilde{h}_{ki}^{(l)} + \epsilon}{\epsilon}\right) + \tilde{h}_{ki}^{(l)} \right) \right] \geq 0
\end{aligned}$$

The proof is done and the last inequality is satisfied since  $x \geq \log(x+1)$  for all  $x \geq 0$  with equality at  $x = 0$ .

## S-2 Convergence Analysis: Proof of Theorem 1

### S-2.1 Conditions for Convergence

The paper [1] shows that given a function  $f(x)$  to be minimized on domain  $\mathcal{X} = \prod_{i=1}^n \mathcal{X}_i$ , if the surrogate function (auxiliary function/majorizer)  $F_i(\cdot | \cdot)$  satisfies the following five properties:

- (P1)  $F_i(\tilde{x}_i | \tilde{x}) = f(\tilde{x})$ , for any  $\tilde{x} \in \mathcal{X}$
- (P2)  $F_i(x_i | \tilde{x}) \leq f(\tilde{x}_1, \dots, x_i, \dots, \tilde{x}_n)$ , for any  $(x_i, \tilde{x}) \in \mathcal{X}_i \times \mathcal{X}$
- (P3)  $F_i(\cdot | \cdot)$  is differentiable on  $\text{int } \mathcal{X}_i \times \text{int } \mathcal{X}$ , there exists a function  $g(\cdot | \tilde{x}) : \nabla F_i(\cdot | \tilde{x}) = g(\cdot | \tilde{x}_i | \tilde{x})$
- (P4) Define  $f_i(\cdot | \tilde{x}) : x_i \mapsto f(\tilde{x}_1, \dots, x_i, \dots, \tilde{x}_n)$ , for any  $x_i \in \mathcal{X}_i$ , and  $\tilde{x} \in \mathcal{X}$ . Then for any  $\hat{x}_i \in \mathcal{X}_i$ ,  $F'_i(x_i; \hat{x}_i - x_i | \tilde{x})|_{x_i = \hat{x}_i} = f'_i(x_i; \hat{x}_i - x_i | \tilde{x})|_{x_i = \hat{x}_i}$  where the directional derivative  $f'(x; d)$  is defined as  $f'(x; d) := \lim_{\delta \rightarrow 0} [f(x + \delta d) - f(x)] / \delta$
- (P5)  $F_i(\cdot | \tilde{x})$  is strictly convex on  $\mathcal{X}_i$ , for any  $\tilde{x} \in \mathcal{X}$

where,

$$\begin{aligned}
\mathcal{X} &= \mathbb{R}_{++}^{M \times K} \times \mathbb{R}_{++}^{K \times N} \\
f_\epsilon(\mathbf{W}, \mathbf{H}) &= \sum_{m=1}^M \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ -\log([\mathbf{W}(\mathbf{H} + \epsilon \mathbf{1})]_{mi}) + \log([\mathbf{W}(\mathbf{H} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\mathbf{H} + \epsilon \mathbf{1})]_{mj}) \right] \\
F_1(x_1 | \tilde{x}) &= u_1(\mathbf{W}, \mathbf{W}^{(l)} | \mathbf{H}^{(l)}) \\
F_2(x_2 | \tilde{x}) &= u_2(\mathbf{H}, \mathbf{H}^{(l)} | \mathbf{W}^{(l+1)})
\end{aligned}$$

the sequence of iterates  $\{(\mathbf{W}^{(l)}, \mathbf{H}^{(l)})\}_{l=0}^\infty$  generated by Algorithm 1 converges to the set of stationary points that minimizes the negative log-likelihood  $f_\epsilon(\mathbf{W}, \mathbf{H})$ .

Although there are truncations to zero during the update of  $\mathbf{H}$ , the update:

$$\mathbf{H}^{(l+1)} = \underset{\mathbf{H} \in \mathbb{R}_{++}^{K \times N}}{\text{argmin}} u_2(\mathbf{H}, \mathbf{H}^{(l)} | \mathbf{W}^{(l+1)}) \quad (\text{S-3})$$

is still satisfied. However, those  $h_{ki}$  that do not involve truncations are updated such that  $[u_2(\mathbf{H}, \mathbf{H}^{(l)} | \mathbf{W}^{(l+1)})]_{ki}$  is minimized. For those  $h_{ki}$  that involve truncations,

$$[u_2(\mathbf{H}, \mathbf{H}^{(l)} | \mathbf{W}^{(l+1)})]_{ki} \Big|_{h_{ki}=0} \leq [u_2(\mathbf{H}, \mathbf{H}^{(l)} | \mathbf{W}^{(l+1)})]_{ki} \Big|_{h_{ki}}, \quad \forall h_{ki} \geq 0$$

is always satisfied by the fact that  $x \geq \log(x+1), \forall x \geq 0$ . Hence, the update rule in equation (S-3) is maintained. We only need to check the five properties.

### S-2.2 Surrogate Functions

We have

$$\begin{aligned} u_1(\mathbf{W}, \mathbf{W}^{(l)} | \mathbf{H}^{(l)}) &= \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ - \sum_k \frac{w_{mk}^{(l)}(h_{ki}^{(l)} + \epsilon)}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \log \left( \frac{w_{mk}}{w_{mk}^{(l)}} [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} \right) \right. \\ &\quad + \log \left( [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} \right) \\ &\quad \left. + \frac{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}} - 1 \right] \end{aligned}$$

and

$$\begin{aligned} u_2(\mathbf{H}, \mathbf{H}^{(l)} | \mathbf{W}^{(l+1)}) &= \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ - \sum_k \frac{w_{mk}^{(l+1)}(h_{ki}^{(l)} + \epsilon)}{[\mathbf{W}^{(l+1)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \log \left( \frac{h_{ki} + \epsilon}{h_{ki}^{(l)} + \epsilon} [\mathbf{W}^{(l+1)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} \right) \right. \\ &\quad + \log \left( [\mathbf{W}^{(l+1)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l+1)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} \right) \\ &\quad \left. + \frac{[\mathbf{W}^{(l+1)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l+1)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}}{[\mathbf{W}^{(l+1)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l+1)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}} - 1 \right] \end{aligned}$$

P1 and P2 are satisfied by the fact that  $u_1$  and  $u_2$  are surrogate functions for  $\mathbf{W}$  and  $\mathbf{H}$  respectively.

### S-2.3 Checking P3 & P4

Firstly, we check slope with respect to  $\mathbf{W}$

$$\begin{aligned} &\left[ \nabla_{\mathbf{W}} f_{\epsilon}(\mathbf{W}, \mathbf{H}^{(l)}) \right]_{mk} \\ &= \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \frac{(h_{ki}^{(l)} + h_{kj}^{(l)} + 2\epsilon)[\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} - (h_{ki}^{(l)} + \epsilon) \left[ [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} \right]}{([\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj})[\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \\ &= \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \frac{h_{kj}^{(l)}[\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} - h_{ki}^{(l)}[\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} + \epsilon \left[ [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} - [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} \right]}{\left[ [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} \right] [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \end{aligned}$$

as well as the slope with respect to  $u_1$

$$\begin{aligned} &\left[ \nabla_{\mathbf{W}} u_1(\mathbf{W}, \mathbf{W}^{(l)} | \mathbf{H}^{(l)}) \right]_{mk} \\ &= \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ - \frac{w_{mk}^{(l)}(h_{ki}^{(l)} + \epsilon)}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \frac{1}{w_{mk}} + \frac{h_{ki}^{(l)} + h_{kj}^{(l)} + 2\epsilon}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}} \right] \end{aligned}$$

It is easy to check that:

$$\begin{aligned}
& \left[ \nabla_{\mathbf{W}} u_1(\mathbf{W}, \mathbf{W}^{(l)} | \mathbf{H}^{(l)}) \right]_{\mathbf{W}=\mathbf{W}^{(l)}}_{mk} \\
&= \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ -\frac{h_{ki}^{(l)} + \epsilon}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} + \frac{h_{ki}^{(l)} + h_{kj}^{(l)} + 2\epsilon}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}} \right] \\
&= \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \frac{h_{kj}^{(l)} [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} - h_{ki}^{(l)} [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} + \epsilon \left[ [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} - [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} \right]}{\left[ [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} \right] [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \\
&= \left[ \nabla_{\mathbf{W}} f(\mathbf{W}, \mathbf{H}^{(l)}) \right]_{\mathbf{W}=\mathbf{W}^{(l)}}_{mk}
\end{aligned}$$

This implies that

$$\nabla_{\mathbf{W}} u_1(\mathbf{W}, \mathbf{W}^{(l)} | \mathbf{H}^{(l)}) \Big|_{\mathbf{W}=\mathbf{W}^{(l)}} = \nabla_{\mathbf{W}} f(\mathbf{W}, \mathbf{H}^{(l)}) \Big|_{\mathbf{W}=\mathbf{W}^{(l)}} \quad (\text{S-4})$$

Next define  $f_{1,\epsilon}(\cdot | \mathbf{H}^{(l)}) : \mathbf{W} \mapsto f(\mathbf{W}, \mathbf{H}^{(l)})$ . This is evaluated as follows

$$\begin{aligned}
& f'_{1,\epsilon}(\mathbf{W}; \widehat{\mathbf{W}} - \mathbf{W} | \mathbf{H}^{(l)}) \\
&= \lim_{\delta \rightarrow 0} \frac{f(\mathbf{W} + \delta(\widehat{\mathbf{W}} - \mathbf{W}) | \mathbf{H}^{(l)}) - f(\mathbf{W} | \mathbf{H}^{(l)})}{\delta} \\
&= \lim_{\delta \rightarrow 0} \frac{1}{\delta} \left[ \sum_m \sum_{(i,j)} b_{ij}^{(m)} \log \left( \frac{[(\mathbf{W} + \delta(\widehat{\mathbf{W}} - \mathbf{W}))(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [(\mathbf{W} + \delta(\widehat{\mathbf{W}} - \mathbf{W}))(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}}{[(\mathbf{W} + \delta(\widehat{\mathbf{W}} - \mathbf{W}))(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \right. \right. \\
&\quad \left. \left. \times \frac{[\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}}{[\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}} \right) \right]
\end{aligned}$$

For simplification, we denote  $a = [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}$ ,  $b = [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}$ ,  $c = [\widehat{\mathbf{W}}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}$ ,  $d = [\widehat{\mathbf{W}}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}$ . Then the above simplifies to

$$\begin{aligned}
f'_{1,\epsilon}(\mathbf{W}; \widehat{\mathbf{W}} - \mathbf{W} | \mathbf{H}^{(l)}) &= \lim_{\delta \rightarrow 0} \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \frac{(1-\delta)a + \delta c + (1-\delta)b + \delta d}{(1-\delta)a + \delta c} \frac{a}{a+b} \\
&= \lim_{\delta \rightarrow 0} \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \frac{1}{\delta} \log \frac{(1-\delta)a^2 + (1-\delta)ab + \delta ac + \delta ad}{(1-\delta)a^2 + (1-\delta)ab + \delta ac + \delta bc} \\
&= \lim_{\delta \rightarrow 0} \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \frac{1}{\delta} \log \left( 1 + \frac{\delta ad - \delta bc}{(1-\delta)a^2 + (1-\delta)ab + \delta ac + \delta bc} \right)
\end{aligned}$$

For further simplification, we denote  $s = ad - bc$ ,  $r = a(a+b)$ ,  $t = c(a+b)$ . The above simplifies to

$$\begin{aligned}
f'_{1,\epsilon}(\mathbf{W}; \widehat{\mathbf{W}} - \mathbf{W} | \mathbf{H}^{(l)}) &= \lim_{\delta \rightarrow 0} \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \frac{1}{\delta} \log \left( 1 + \frac{\delta s}{(1-\delta)r + \delta t} \right) \\
&= \lim_{\delta \rightarrow 0} \sum_m \sum_{(i,j) \in \mathcal{P}_m} \log \left( 1 + \frac{\frac{s}{r}}{\frac{1}{\delta} + \frac{t-r}{r}} \right)^{\frac{1}{\delta}} \\
&= \lim_{\delta \rightarrow 0} \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \log \left( 1 + \frac{\frac{s}{r}}{\frac{1}{\delta} + \frac{t-r}{r}} \right)^{\frac{1}{\delta} + \frac{t-r}{r}} - \log \left( 1 + \frac{\frac{s}{r}}{\frac{1}{\delta} + \frac{t-r}{r}} \right)^{\frac{t-r}{r}}
\end{aligned}$$

since  $(1 + \frac{t}{f(x)})^{f(x)} \rightarrow e^t$  as  $f(x) \rightarrow \infty$  and  $\frac{1}{\delta} + \frac{t-r}{r} \rightarrow \infty$  as  $\delta \rightarrow 0$ . Thus,

$$\begin{aligned}
& f'_{1,\epsilon}(\mathbf{W}; \widehat{\mathbf{W}} - \mathbf{W} | \mathbf{H}^{(l)}) \\
&= \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \frac{s}{r} \\
&= \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \frac{ad - bc}{a(a+b)} \\
&= \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \frac{[\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} [\widehat{\mathbf{W}}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} - [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} [\widehat{\mathbf{W}}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}}{[\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} \left[ [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} \right]}
\end{aligned}$$

Similarly,

$$\begin{aligned}
& u'_1(\mathbf{W}; \widehat{\mathbf{W}} - \mathbf{W}, \mathbf{W}^{(l)} | \mathbf{H}^{(l)}) \\
&= \lim_{\delta \rightarrow 0} \frac{\tilde{u}_1(\mathbf{W} + \delta(\widehat{\mathbf{W}} - \mathbf{W}) | \mathbf{W}^{(l)}, \mathbf{H}^{(l)}) - \tilde{u}_1(\mathbf{W} | \mathbf{W}^{(l)}, \mathbf{H}^{(l)})}{\delta} \\
&= \lim_{\delta \rightarrow 0} \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \frac{1}{\delta} \left[ - \sum_k \frac{w_{mk}^{(l)}(h_{ki}^{(l)} + \epsilon)}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \log \left( \frac{(1-\delta)w_{mk} + \delta \hat{w}_{mk}}{w_{mk}} \right) \right. \\
&\quad \left. + \frac{\delta \left( [\widehat{\mathbf{W}}(\mathbf{H}^{(l)} + \epsilon \mathbf{1}) - \mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\widehat{\mathbf{W}}(\mathbf{H}^{(l)} + \epsilon \mathbf{1}) - \mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} \right)}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}} \right] \\
&= \lim_{\delta \rightarrow 0} \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ - \sum_k \frac{w_{mk}^{(l)}(h_{ki}^{(l)} + \epsilon)}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \log \left( 1 + \frac{\frac{\hat{w}_{mk} - w_{mk}}{w_{mk}}}{\frac{1}{\delta}} \right) \right. \\
&\quad \left. + \frac{\left( [\widehat{\mathbf{W}}(\mathbf{H}^{(l)} + \epsilon \mathbf{1}) - \mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\widehat{\mathbf{W}}(\mathbf{H}^{(l)} + \epsilon \mathbf{1}) - \mathbf{W}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} \right)}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}} \right]
\end{aligned}$$

where the last equality again follows from the fact that  $(1 + \frac{t}{f(x)})^{f(x)} \rightarrow e^t$  as  $f(x) \rightarrow \infty$ . Thus,

$$\begin{aligned}
u'_1(\mathbf{W}; \widehat{\mathbf{W}} - \mathbf{W}, \mathbf{W}^{(l)} | \mathbf{H}^{(l)}) &= \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ - \sum_k \frac{w_{mk}^{(l)}(h_{ki}^{(l)} + \epsilon)}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \frac{\hat{w}_{mk} - w_{mk}}{w_{mk}} \right. \\
&\quad \left. + \frac{[(\widehat{\mathbf{W}} - \mathbf{W})(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [(\widehat{\mathbf{W}} - \mathbf{W})(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}} \right]
\end{aligned}$$

Now we evaluate the expressions above at the point  $\mathbf{W} = \mathbf{W}^{(l)}$  as follows

$$\begin{aligned}
& u'_1(\mathbf{W}; \widehat{\mathbf{W}} - \mathbf{W}, \mathbf{W}^{(l)} | \mathbf{H}^{(l)}) \Big|_{\mathbf{W}=\mathbf{W}^{(l)}} \\
&= \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ - \sum_k \frac{w_{mk}^{(l)}(h_{ki}^{(l)} + \epsilon)}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \frac{\hat{w}_{mk} - w_{mk}^{(l)}}{w_{mk}^{(l)}} + \frac{[(\widehat{\mathbf{W}} - \mathbf{W})(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [(\widehat{\mathbf{W}} - \mathbf{W})(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}} \right] \\
&= \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left[ - \frac{[(\widehat{\mathbf{W}} - \mathbf{W})(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} + \frac{[(\widehat{\mathbf{W}} - \mathbf{W})(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [(\widehat{\mathbf{W}} - \mathbf{W})(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj}} \right] \\
&= \sum_m \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \frac{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} [\widehat{\mathbf{W}}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} - [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} [\widehat{\mathbf{W}}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} \left[ [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi} + [\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mj} \right]} \\
&= f'_{1,\epsilon}(\mathbf{W}; \widehat{\mathbf{W}} - \mathbf{W} | \mathbf{H}^{(l)}) \Big|_{\mathbf{W}=\mathbf{W}^{(l)}}
\end{aligned}$$

Together with equation (S-4), we have proved P4.

The same idea can be applied to the surrogate function with respect to  $\mathbf{H}$ , hence we conclude that:

$$\begin{aligned} u'_1(\mathbf{W}; \widehat{\mathbf{W}} - \mathbf{W}, \mathbf{W}^{(l)} | \mathbf{H}^{(l)}) \Big|_{\mathbf{W}=\mathbf{W}^{(l)}} &= f'_{1,\epsilon}(\mathbf{W}; \widehat{\mathbf{W}} - \mathbf{W} | \mathbf{H}^{(l)}) \Big|_{\mathbf{W}=\mathbf{W}^{(l)}} \\ u'_2(\mathbf{H}; \widehat{\mathbf{H}} - \mathbf{H}, \mathbf{H}^{(l)} | \mathbf{W}^{(l+1)}) \Big|_{\mathbf{H}=\mathbf{H}^{(l)}} &= f'_{2,\epsilon}(\mathbf{H}; \widehat{\mathbf{H}} - \mathbf{H} | \mathbf{W}^{(l+1)}) \Big|_{\mathbf{H}=\mathbf{H}^{(l)}} \end{aligned}$$

### S-2.4 Checking P5

We have,

$$\begin{aligned} \frac{\partial^2}{\partial w_{mk}^2} \tilde{u}_1(\mathbf{W} | \mathbf{W}^{(l)}, \mathbf{H}^{(l)}) &= \sum_{(i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left( \frac{w_{mk}^{(l)}(h_{ki}^{(l)} + \epsilon)}{[\mathbf{W}^{(l)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \frac{1}{w_{mk}^2} \right) \\ \frac{\partial^2}{\partial h_{ki}^2} \tilde{u}_2(\mathbf{H} | \mathbf{W}^{(l+1)}, \mathbf{H}^{(l)}) &= \sum_m \sum_{j \neq i: (i,j) \in \mathcal{P}_m} b_{ij}^{(m)} \left( \frac{w_{mk}^{(l+1)}(h_{ki}^{(l)} + \epsilon)}{[\mathbf{W}^{(l+1)}(\mathbf{H}^{(l)} + \epsilon \mathbf{1})]_{mi}} \frac{1}{(h_{ki} + \epsilon)^2} \right) \end{aligned}$$

Hence,  $u_1, u_2$  are strictly convex if  $w_{mk} > 0$  and  $h_{ki} \geq 0$ . This is satisfied since  $(\mathbf{W}, \mathbf{H})$  are both initialized to be positive, i.e.,  $\mathbf{W}^{(0)} \in \mathbb{R}_{++}^{M \times K}$ ,  $\mathbf{H}^{(0)} \in \mathbb{R}_{++}^{K \times N}$ , and during the update of  $\mathbf{W}$  and  $\mathbf{H}$ , entries are kept positive for  $\mathbf{W}$  and nonnegative for  $\mathbf{H}$ .

The five properties are satisfied and hence by [1] the sequence converges to the set of stationary points.

## S-3 Non-decreasing likelihood

Figure S-1: Plot of the evolution of negative log-likelihoods

Fig. S-1 shows that the likelihood is non-decreasing (negative log-likelihood is non-increasing).

## S-4 Numerical Results for $K = 3$ for men

Tables S-1 and S-2 show the  $\mathbf{W}$  and  $\mathbf{H}$  matrices for the men when  $K = 3$ . The matrix  $\mathbf{\Lambda} = \mathbf{WH}$  when  $K = 3$  is displayed in Tables S-3 and S-4.

| Tournaments          | Row Normalization |           |          | Column Normalization |          |          |
